2017

TREBUCHET CONTEST

RULES

&

REGULATIONS

•SAFETY•

Remember there is an element of danger with creating and operating a siege machine. Use adult supervision.

Trebuchet Contest Rules:

1. Distance
2. Accuracy

Event Description

Accurately launch a projectile into a target area using only the energy from a falling counterweight.

Trebuchet Construction Guidelines:

Arm Length - 10 foot.

Projectile - 8lb Pumpkin (supplied by event).

Counterweight - 1000 Pounds maximum.

Maximum Height: 12ft with arm in stored position.

Teams will be competing in both Distance and Accuracy contest categories.

Current Distance Record is 221' MAX measurable is 450'

Note: Floating Arm Trebuchets (FAT) are prohibited from competition. If you have a (FAT) Trebuchet please bring it to Pumpkin Chunkin Palooza to discuss the physics behind the trebuchet.

Rules:

1. No energy can be stored in deformation of components. That means no springs, rubber bands or flexible arms. The counterweight must be attached, not looped over, the end of the arm (or in close proximity).
2. The Trebuchets will be inspected for safety. Any parts that are unnecessarily loose must be tightened. No parts of the Trebuchet other than the projectile are allowed to become completely disconnected from the trebuchet (A partial disconnect is necessary in order to release the projectile). **Any Trebuchet deemed to be unsafe will be disqualified.**
3. Counterweights must not come free during competition. If a counterweight falls off, the trebuchet operator must operate with the remaining counterweights. If the trebuchet becomes inoperable due to a loss of all counterweights, it must be declared lost and removed from the competition.
4. Qualification at check-in does not represent permanent qualification. Trebuchets are subject to random checks at any time. This is done to prevent a) illegal modifications to trebuchets, b) overcome deficiencies in the volunteer qualifiers' judgment c) ensure safety. **It is your responsibility to make sure that you understand the rules, and that your trebuchets meet the requirements.** Our failure to 'catch' illegal trebuchets before the tournament does not take away our right and responsibility to correct such mistakes later.
5. **Your trebuchet must be triggered remotely from outside the launch area (at least 6 feet)**
6. All trebuchets must be brought to the contest assembled and tested beforehand. The trebuchet must appear and be demonstrably safe to our judges in a test launch prior to the contest. Any misfire or failure must not be capable of hitting the bystanders or the operator in any way.

Contest #1: Distance

Rules:

1. The trebuchet will be given 3 launches and only the longest of the 3 will count toward the final standings. All trebuchets must complete all three launches within 10 min. If your trebuchet takes more than 10 min. to reload and fire; only the launches made within the first 10 min. will count. If your trebuchet breaks or fails to launch you will have only 5 min. to repair your trebuchet and finish the remainder of your launches. Trebuchets will be lined up at arm pivot points.
2. The projectiles will be provided by the event officials. The projectiles weigh 8 pounds and are roughly the size and weight of a bowling ball. Distance will be measured from the front of the trebuchet to the point of first impact.
3. In the event of a tie a single launch from each trebuchet will determine the winner by measuring the longest hurl.

Contest #2: Accuracy

The goal of this contest is to have a trebuchet that can shoot reliably and accurately.

You will launch a projectile (provided by event officials - see above) repeatedly to a target.

Rules:

- 1. Each trebuchet must launch 3 times within 10 minutes. If your trebuchet is unable to complete three shots within the 10 minutes you will be disqualified.**
- 2. A score will be awarded to each shot. A shot that hits within 3ft of the stake will receive 3 points, 6 feet= 2 points, 9 feet= 1 point.**
- 3. A tie will result in a one shot shoot-off. The closest shot will win.**

Arm Definition: Arm - The upright beam that has a sling on one end and the counterweight on the opposite end.

Arm length is beam length. Sling hook is not considered part of the arm. Hook length cannot exceed 6 inches

Trebuchet - n. A medieval catapult for hurling heavy stones.- from the American Heritage College Dictionary
